Heavy Duty

Parla Heavy Duty wood flooring is principally designed for public places like hotels, shops, offices and restaurants – to any place where the floor is in constant use.

Together with the plywood construction, the thick surface increases the floor's life span and makes the floor considerably more subdue and controlled. Heavy Duty selection consists of the 21 mm thick 2-layer Heavy Duty, which can be installed floating, and the 26 mm thick 3-layer Heavy Duty, which is fixed straight to the subfloor.

Parla Heavy Duty is an exclusive and durable wooden floor. Choose subtle oak, fresh ash or gorgeous merbau, according to your own style.

Technical information

Heavy Duty floorings have a 6 mm surface layer of hardwood. The slightly bevelled sides and ends of the boards create an exquisite look to the floor.

The base of the 21 mm Heavy Duty flooring is 15 mm plywood. The thickness and composition of the base is the result of extensive R&D.

The 26 mm Heavy Duty consists of a 6 mm bottom layer and a 14 mm middle layer of plywood. The 3-layer glued structure makes the floor rigid and stable.

Surface treatment

Heavy Duty wood floorings are treated with effective, safe and durable lacquer.

The main features of the lacquer are its anti-scratch and anti-microbial effects.

The lacquer protects the wooden floor from scratches and keeps the surface hygienic.
