Solid wood floorings

Parla solid wood floorings are natural wood at its most beautiful form.

Wooden floor is pleasant and durable in use. It is a comfortable and elegant choice for your home and holiday home. The wood flooring draws the attention both in a modern or more traditional furnishing.

Parla selection consists of various alternatives concerning the structure and the appearance of the floor. We have solid wood floorings with broad boards, narrower ones, floors for floating installation and floors that can be installed with underfloor heating.

Choose an ecological alternative! Real wood is proven to improve the quality of indoor air and it's benefits for the environment are undeniable.

PARLA®

Selection

- Solid wood structure 26 x 137 x 2200 mm
- 3-layer structure 26 x 137 x 2200 mm
- Glued structure 26 x 200 x 2000 mm
- Plywood structure 21 x 137 x 2200 mm

The floors are screwed on the supports (max 600 mm) and they can be installed with underfloor heating as long as the surface temperature of the flooring does not exceed +24°C. Solid wood flooring with plywood structure is suitable for both floating installation and screwing on the supports (max 400 mm).

Wood Species

Pine

Surface treatment options

Unfinished

Lacquered

Solid wood structure: Traditional, completely solid wood board.

3-layer structure: Symmetrical 3-layer structure ensures the stability of the floor. Plywood in the middle surrounded by 6 mm thick bottom layer and surface layer.

Glued structure: Wide floorboard, glued together from five layers. The glued structure reduces the natural expanding and contracting of the wood significantly.

Plywood structure: 6 mm thick surface layer, underneath a bottom layer made of plywood. Suitable for floating installation.

All products are tongued and grooved on all sides and the rims are lightly bevelled.
